Diagnosing susceptibility to schizophrenia in a patient, involves detecting polymorphic marker allele within chromosome segment 1q22 bordered by DIS2705 and DIS1679 and linked to variant form of SCZ I Human heat shock protein HSPA7-encoding DNA. (RUTF ) UNIV RUTGERS STATE NEW JERSEY. Claim 19; Page 64-66; 77pp; English. ABA02398 standard; DNA; 2493 BP. 

This sequence represents DNA encoding the human heat shock protein HSPA7. The HSPA7 gene is located on chromosome 1q22, a region thought to be

ADR14394 ADP22911 ADV42954

Result Š

disorder. The invention identifies the HISPA peracea benizogeneral and the HISPA gene as an SCZ gene, a variant form of which is associated with a schizophrenia phenotype. The invention relates to a novel method of disgnosing a patient so the susceptibility to schizophrenia. The method involves determining the presence of an allele of a polymorphic marker linked to a variant form of SCZ gene within a segment of chromosome leg2 bordered by 10182705 and 1018679. The polymorphic marker allele is in phase with the variant form of SCZ, and its presence indicates a susceptibility to schizophrenia and related disorders. The polymorphic marker is APOA2, FCERIG, FCERIG, The polymorphic marker is APOA2, FCERIG, FCCRAA, DISSG75, or preferably B426K24T. The invention also relates to a method for determining an alteration in an SCZ promoter sequence, where the alteration is associated with a schizophrenic condition, and a method for assessing a test compound for its ability to modulate the activity of an SCZ procein. The methods of the invention are useful for disgnosting schizophrenia or schizoaffective disorder, or a susceptibility to these conditions in a patient using a saliva, blood or buccal mucosal cell sample. The HSPA7 proteins and nucleocides have neuroleptic activity and may be used in gene therapy, and HSPA7 protein modulating compounds may be used in gene therapy, and HSPA7 protein modulating compounds may be used in gene therapy, and HSPA7 protein modulating compounds may be used in gene therapy, and ASPA7 protein modulating compounds may be used in gene therapy, and ASPA7 protein modulating compounds may be used in gene therapy, and ASPA7 protein modulating compounds may be used in gene therapy. Schizophrenia and related disorders. The invention also provides a highly accurate assay for in usero screening of octuses assay for in usero screening of schizophrenia and related disorders. administration of appropriate treatment at an early stage

```
The invention relates to a method of monitoring or predicting the response of a patient treated for cancer by administering an anti-cancer agent. The method comprises: (a) determining the level of expression of one or more genes or gene products in a first biological sample taken (c) and the patient prior to treatment with the anti-cancer agent; (b) determining the level of expression of one or more genes or gene products in at least a second biological sample taken from the patient subsequent to the treatment with the anti-cancer agent; and (c) comparing the level of expression of one or more genes(s) or gene products in the second of one or more genes(s) or gene products in the first biological sample, where a change in the level of expression of one or more genes or gene products in the first biological sample, where a change in the level of expression of one or more genes or gene products in the first biological sample indicates the comparing the treatment with the anti-cancer agent or predicts the comparing of the patient to anti-cancer agent. Also described are: (1) a method for identifying a compound, useful for treating cancer; (2) a method for providing a patient diagnosis for cancer; (3) a microarray comprising two or more probes corresponding to two or more genes or method for providing a patient diagnosis for cancer; (3) a microarray comprising two or more probes corresponding to two or more genes or in the specification or comprising wo or more polypeptides comprising or any of the 20 sequences given as SEQ ID NOS: 21-40 in the specification or comprising a primer or probe for measuring the comprising an antibody specific for a polypeptide selected from SEQ ID CCC comprising an antibody specific for a polypeptide selected from SEQ ID CCC comprising an antibody specific acid selected from SEQ ID CCC distinguishing between normal and diseases states, and for determining the expression profiles, and microarrays comprising an a tissue or cell sample, for discovering novel drugs or predicting the corres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          194 GCCTCCGTGGCCTCCAGCATCCGACAAGAAGCTTCAGCCATGCAGGCCCCACGGGAGCTC 253

Polymucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polymucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and antagonists may have neuroprotective; cytostatic; cardioactive; and cardioactive; cardioactive; cardioactive; cardioactive; cardioactive; cardioactive; cardioactive; mumnomodulacory; muscular active general; vulnerary; gastrointestinal cativity. The invention also includes antibodies specific for the protein activity. The invention also includes antibodies specific for the protein cor polymucleotide sequences. The lung cancer associated polymucleotide sequences. The proteins may be used for inmerous other diagnostic cor research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases.

Polymucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polymucleotide and protein sequences 1454 AGCAGGTGGGGTGATGACCACGCTGATCCAGAGGAACGCCACTATCCCCACCAAGCAGAC 1513 Human; lung cancer associated protein; neuroprotective; cytostatic; cardioactive; lumunomodulatory; muscular active; vulnerary; gastrointestinal; nephrotroplc; antiinfective; gynecological; antibacterial; diagnosls; neural disorder; immune disorder; reproductive; proliferative disorder; wound healing; infectious disease; ds. to as lung cancer diagnosis of disorders TGAGAAAGTGCAGGATCTCCTGCTGCTGGATGTGGCTCCCCTGTCTCTGGGGGCTGGAGAC CCAGACTTTCACCACCTACTCGGACAACCAGCCTGGGGTCTTCATCCAGGTGTATGAGG cancer associated polynucleotide sequence SEQ ID 281

The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hyperension, type of the treating liver disorder such as hyperlipidaemia, hyperension, type of II diabetes, tumours of the liver and disorders of the inflammatory and immune response. The composition is useful for a high-throughput method of specifically binds a cDNA. A protein encoded by the cDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify at least one ligand which specifically binds the compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the cDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a molecule or compounds to identifying a ligand which specifically binds the protein. The composition is useful for detecting and conditions to allow and the composition is useful for detecting and conditions to allow specifically conditions to allow and the composition is useful for detecting and conditions to allow specifically conditions to allow specifically conditions to allow specifically conditions the protein. The present sequence represents a cDNA differentially expressed in a liver disorder.
                                                                                                                                       Composition comprising several cDNAs that are differentially expressed in treated human C3A liver cell cultures, useful for treating liver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCCACCACCTACTCGTGCGTGCGTGTTTCAGCAGGCCGCGTGGAGATCCTGGCCAAC 331

```
New combination comprising several cDNAs that are differentially expressed in activated T cells, useful for diagnosing, treating, staging or monitoring treatment for allergy, cancer, infectious and/or autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to the sequences of several cDNAs that are differentially expressed in activated T cells. The sequences of the invention may have antiallergic, cytostatic, immunosuppressive and antimicrobial activity and may be used in gene therapy. The invention also comprises a method for screening samples for differentially astronomed genes and a method for detecting these cDNAs by hybridisation. The methods and compositions of the present invention are useful for diagnosing, treating, staging or monitoring treatment for allergy, cancer, chronic graft versus host disease, infectious and/or autoimmune disorders. The present sequence represents a CDNA of the invention that is differentially expressed in activated T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CCGAGCGGCTGGTCGGGGACGCGGCCAAGAGCCCAGGCGGCCCTGAACCCCCCACAACACCC

(I) comprises several cDNAs that are differentially expressed in brain disorders and chosen from any one of 138 nucleotide sequences of ARA47798-ARA4335, or their complements. Also described: (I) a high throughput method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids; (2) an isolated CDNA (II) selected from ARA43812, ARA43813, ARA43831, ARA43855, ARA43856,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cerebroprotective;

                                                         The invention relates to a new composition comprising ADI61633-
ADI61770and their complements that are cDNAs differentially expressed in
brain disorders. Also included are a high throughput method for detecting
differential expression of one or more CDNAs in a sample containing
nucleic acids and a high throughput method for screening a library of
molecules or compounds to identify a ligand that specifically binds a
CDNA. The expression of the each of the CDNAs is downregulated at least
two-fold in the brain of the subjects with Alzheimer's disease (ADI61633-
ADI617273) or upregulated at least two fold in Alzheimer's disease
(ADI61728-ADI61770). The composition is useful for disquosing or treating
Alzheimer's disease. The present sequence is a cDNA downregulated at
least two-fold in the brain of the subjects with Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CGTGGCCTCCAGCATCCGACAAGAAGCTTCAGCCATGCAGGCCCCACGGGAGCTCGCGG 758

셤 ò

ઠે 셤 ઠે Human cDNA from gene modulated by pro-inflammatory cytokines #45.

(first entry)

26-AUG-2004

Human; ss; cytokine; peripheral blood mononuclear cell; PBMC differential expression; immune disorder; pro-inflammatory dural infection; rheumatoid arthritis;

```
AEM43883 and AEM43923; (3) an expression vector (III) containing (III); (4) a host cell (IV) containing (III); (5) a protein (V) produced using (IV); and (6) a pharmaceutical composition comprising (V). (i) is useful compounds to identify a ligand which specifically binds a cDNA, where the compound involves combining (I) with the library of molecules or compound under conditions to allow specific binding and detecting specific binding conditions to allow specific binding and detecting a protein, which involves culturing (IV) is useful for the expression of the protein and recovering the protein from the culture. (V) is useful for high throughput method for screening a library of molecules or compounds to identify a ligand which specific binding conficient or its portion with the culturary of molecules or compound under conditions to allow specific binding and detecting specific binding between (V) and a molecule or compound. (V) is useful for purifying a ligand which specific or involves combining (V) or its portion with the sample under conditions to allow specific binding, recovering the bound protein and separating the involves from ligand. (V) is also useful for producing an antibody, which involves immuniting an antibody response, isolating animal antibodies and screening the involves immuniting an antibodies with the protein. (II) is useful in gene therapy for the treatment or prevention of conditions and disorders associated with immune response. The present sequence represents a human cDNA is the conditions and involves which is differentially expressed in brain tissues, which is sequence which immune temponse. The present sequence represents a human cDNA is the condition of the condition of the conditions and disorders associated with immune response. The present sequence represents a human cDNA is the condition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1058
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               758

The invention relates to a composition comprising polynucleotides whose expression is modulated by cytokines, where the polynucleotides comprise any of the CONA fragments (laolated from peripheral blood monounclear cells (PBMC)) and appearing as ADP6609-ADP66524, or their complements.

Also included are a substantially purified polynucleotide whose cypression is modulated by cytokines comprising at least a fragment of a gene selected from ADP6609-ADP66521, a high throughput method for detecting a polynucleotide in a sample, methods of purifying ligands, an containing the expression vector, anethod for producing a protein, a containing a library of molecules or compounds to identify a ligand or at cleast one ligand which specifically binds a protein, and amethod of containing a library of molecules or compounds to identify a ligand or at least one ligand which specifically binds a protein, and a method of condition or disease. The immune disorder, condition or disease is a procinglammatory disorder (selected from viral lifections, rheumarcid arthritis, inflammatory bowel disease, pooriasis, and an antihflammatory disorder topic disorder, condition or disease, chronic graft compassitic infections, allergies and other topic disorders, chonic graft composition and methods are useful for detecting genes modulated in response to human cytokines or for a memory is modulated by a company of a probably contained and methods are useful for detecting genes modulated by a proper or the propose to human cytokines or form a memory disorder or suppose the propose of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequence is a cDNA fragment from a gene whose expression is modulated by pro-inflammatory cytokines. NOTE: Details of the expression levels of the genes in response to various cytokines are said to be contained in tables 1-4, but these tables are not included in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A composition comprises polynucleotides that are modulated in response t cytokines, useful for diagnosing or treating conditions associated with an immune response, e.g. infection, diabetes, allergies or scleroderma.

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (I) has cytostatic activity and can be used in the neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the act collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, actionea, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating langament of cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         264
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   306
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               246

The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by DNA chip analysis as given in the specification, and comparing the DNA chip analysis as given in the specification, and comparing the differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the modulating GA by contacting GC with an agent that alters the capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a parhogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammatory disease, by detecting the level of pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene (6) from GS, where the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic

cc response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an egent that modulates the expression of gene(s) from Ga in the tissue. Miles is useful for detecting GCA, M2 is useful for modulating GA, M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation of inflammation in a tissue; M4 is useful for detecting an inflammation of exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult cardiac reperfusion injury, parasitic infection, procozoal infection, conficion, procozoal infection, procozoal infection, procozoal infection, procozoal infection, parasitic infection, procozoal infection, conditions. The present sequence represents a gene differentially conditions. The present sequence represents a gene differentially conditions. The present sequence represents a gene differentially conditions are of the printed specification, but was obtained in celetronic format directly from Wilpo at the printed specification, but was obtained in celetronic format directly from Wilpo at the printed specification but was obtained in celetronic format directly from Wilpo at the printed specification but was obtained in celetronic format directly esquences

definition and therapy of chronic inclammatory joint diseases, and other inflammatory disorders, infective or tumour diseases in humans. The products of the invention have antiinflammatory, cytostatic.

The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be used for gene therapy. The reagent of the invention and any proteins and antibodies derived from it, are used (1) for analysing tissue and blood samples for medical diagnosis, (ii) for diagnosis and characterisation of chronic joint diseases, on the basis of molecular characterisation, and determining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for developing treatments for inflammatory diseases, particularly of joints, infections and tumours. Academatory diseases, particularly of joints, infections and tumours. Academatory diseases thuman polynucleotides
                                                                                                                                             and therapy of chronic inflammatory joint any of many specified genes or derived

The invention relates to using a biomarker for a neurodegenerative disease for disgussing a neurodegenerative disease, monitoring a therapeutic agent for treating a neurodegenerative disease, monitoring a response to a neurodegenerative disease, monitoring a response to a neurodegenerative disease, in a deif ferentially diagnosing a neurodegenerative disease in a test subject. Also included are disquasing a neurodegenerative disease in a test subject, screening for a therapeutic a neurodegenerative disease in a test subject, monitoring a response control of the treatment of a neurodegenerative disease progression in a subject, identifying a risk for a neurodegenerative disease progression in a subject, identifying a risk for a neurodegenerative disease in a test subject, identifying a risk for a neurodegenerative disease in a test subject, identifying a risk for a neurodegenerative disease in a test subject, identifying a risk for a neurodegenerative disease, in a test subject, a solid support comprising one or more biomarkers, where the biomarker is one or more proteins comprising phydroliponase, ATP-synthase beta chain, and a protein AI, superoxide dismusase, ATP-synthase beta chain, and spolid and AI, superoxide dismusase, RNA-shading protein RAPIB, conditions and as solid support comprising one or more biomarker is one or more transcripts comprising cyclin Di, cyclin Gi, weel, hTR2, CDC25b, GSK3 beta, protein kinase C alpha, CS, CI cinhibitor, IL-17r, IL-8, LIF, TNF-alpha, IL-10r, Alba, CR, Alpha, A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    205 GGCAGCAGCCTCCGTGGCCTCCAGCATCCGACAAGAAGCTTCAGCCATGCAGGCCCCCACG 264
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neurodegenerative disease, screening a therapeutic agent for treating a neurodegenerative disease, monitoring a neurodegenerative disease progression monitoring a response to a neurodegenerative disease treatment, identifying a risk for a neurodegenerative disease, and differentially diagnosing a neurodegenerative disease, e.g. Alzheimer's disease and Parkinson's disease, in a test subject. The present sequence is a DNA for a human biomarker, used in a microarray in the method of the invention. NOTE: The specification describes AEF92574-AEF92813 (table 4)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GGCAGCAGCCTCCGTGGCCTCCAGCATCCGACAAGAAGCTTCAGCCATGCAGGCCCCACG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to diagnosing susceptibility to schizophrenia in a patient comprising determining the presence/absence of an allele of a golymorphic marker in the DNA of a patient, where the polymorphic marker is within the chromosome segment 1922 bordered by Dis2705, Dis1679 and linked to the DNA segment SCZ having a variant form associated with phenotype of schizophrenia, where the allele is in phase with the variant form of SCZ and the presence of the allele is in phase with the variant form of SCZ and the presence of the allele indicates susceptibility to schizophrenia. The method can be used for in utero screening of fetuses for the presence of a variant SCZ allele. Identification of such variant configurations of such the possibility of gene therapy and for couples known to be at risk of giving rise to an affected progeny, diagnosis can be

combined with in vitro reproduction procedures to identify an embryo having wild-type SCZ allales before implantation. Screening children shortly after birth allows administration of appropriate treatment at an early stage of detection. The genetic tests provide a highly accurate assay for diagnosing schlzophrenia and schlzophrenia susceptibility. The SCZ gene encodes a previously isolated sequence encoding human heat shock protein 708 (HSP708, GenBank Accession Number NM002155)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    292

This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have cytostatic, antiinflammatory, ophthalmological, antiateriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for diagnosing or treating a hypoxia-regulated condition, such as tumourigenesis, andjogenesis, apoptosis, inflammation, erythropoiesis, or the biological response to hypoxia conditions cruckensis and supportation, catecholamine synthesis, including processes such as glycolysis, gluconeogenesis, glucose including processes includes cancer, ischaemic conditions catecholamine synthesis, including reperfusion injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein encoding DNA sequence of the invention.
hypoxia-regulated condition, such as cancer, ischemia, reperfusion ijury, retinopathy, pre-eclampsia, atherosclerosis, inflammation, or

21-MAY-2004.

The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases. multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a reference mRNA sequence of the invention which show altered expression in renal transplantation and expression. ö 120 412 180 472 Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of the genes. 293 GGCGTGTTTCAGCAGGGCCGCGTGGAGATCCTGGCCAACGACCAGGGCAACCGCACCACG 352 9 61 GGCGTGTTTCAGCAGGCCGCGTGGAGATCCTGGCCAACGACCAGGGCAACCGCACCAC 121 CCCAGCTACGTGGCCTTCACCGACACCGACCGGCTGGTCGGGGACGCGGCCAAGAGGCCAG 413 GCGGCCCTGAACCCCCCACAACACCGTGTTCGATGCCAAGCGGCTGATCGGGCGCAAGTTC 181 GCGGCCCTGAACCCCCACAACACCGTGTTCGATGCCAAGCGGCTGATCGGGCGCAAGTTC Gaps Ë Morris ö Length 1932; Sequence 1932 BP; 423 A; 552 C; 632 G; 325 T; 0 U; 0 Other; 0; Indels 241 GCGGACACCACGGCGAGTCGGACATGAAGCACTGGCCCTTCC 283 Prentice J, 473 GCGGACACCACGGTGCAGTCGGACATGAAGCACTGGCCCTTCC 11.4%; Score 283; DB 12; I 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             301 TCAGCAGGCCGCGTGGAGATCCTGGCCAACGACCAGGCAACCGCACCACGCCCAGCTA 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7, Application US/10764316
Fublication No. US20060127359A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR HEAT ACTIVATED GENE
TITLE OF INVENTION: THERAPY USING CYTOLETHAL DISTENDING TOXIN
TITLE OF INVENTION UNMBER: US/10/764,316
CURRENT APPLICATION NUMBER: US/10/764,316
CURRENT PILING DATE: 2004-01-23
FRIOR PILING DATE: 2003-01-24
RICA FILING DATE: 2003-01-24
SOGTWARE: PATENTING OF SEQ ID NOS: 25
SOGTWARE: PATENTIN Ver. 3.3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121 AGCCGGCTGGCGCCAGAAACCGCAGGAAAGCCTCCTGCTGAGGCCCCCTCGACGG

FEATURES

```
the normalized library NCI_CGAP_Lu5 was prepared, and secricles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                             2025

//note="Vector: pT713D-Paci; Site 1: Not I; Site 2: Eco RI;
Plasmid DNA from the normalized library NCI_CGAP_GC4 was
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(cloneIDs 1257096-1258631, 1469064-1470983, and
Hy5529-1476743). Subtraction by Bento Soares and M.
Fatima Bonaldo. "

/popared, and se circles were made in vitro. Following HAP
prepared, and se circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(cloneIDs 1257096-1258631, 1469064-1470983, and
1475592-1476743). Subtraction by Bento Soares and M.
Patina Bonaldo.

Contact: Genoscope control de Sequencage Genoscope - Centre National de Sequencage Genoscope - Centre National de Sequencage 2 rue Gaston Cremieux, CP 5706 - 91057 EVYR cedex - FRANCE Email: seqrefégenoscope.cns.fr. Web : www.genoscope.cns.fr lst strand cDNA was primed with a NotI-oligo(dI) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecoa V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Center project name: 14583

Center clone name: 25 1 17

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencing problems, such chemistry or covered by high quadilty data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Popclets/C_elegans/wormpep This sequence was generated from part of bacterial.clone contigs of human chromation can be found at http://www.sanger.ac.uk/HGP/Chrl
RRII-2SYZ1 is from the library RPCI-11.1 constructed by the group of Putther information can be found at http://www.chori.org/bacpac/home.htm

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 107755: contig of 107755 bp in length
107756 107855: gap of 100 bp
107856 116035: contig of 28180 bp in length.

NEDO human CDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; CDNA illivary
Construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5. e 3.-end one pass sequencing:
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and RAB; annotation: HRI and RAB.

RAB; annotation: HRI and RAB.
                                                                                                                                                                                                                                      Suzuki,O., Sasaki,N., Aotsuka,S., Shoji,T., Ichihara,T.,
